

# ConnectPay

An advanced card payment system incorporating a choice of solutions

## How ConnectPay Works

To take payments using ConnectPay your business will need a merchant account. We can either use your existing account or, if you don't have one, assist you in opening a new account.

ConnectPay is a multi-functional payment gateway allowing you to take payments in all areas of your business. It connects to all UK acquirers and accepts all types of credit and debit cards. Included is a powerful internet based administration tool that logs every transaction made. This provides a useful reconciliation tool for checking transaction history, performing refunds, and also adding and removing users from your account.

### Web Payments

ConnectPay includes an online payment gateway enabling you to accept card payments via your website. With a simple integration your website can allow your customers to pay for goods and services by credit or debit card, PayPal, ApplePay or AndroidPay.

### Automated Telephone Payments

Accept credit and debit card payments over the phone using TonePay, the ConnectPay automated telephone payment module. Available 24/7 and proven to significantly reduce the number of calls to your call centre.

### Smart Phone Applications

Different smart phone apps allow you to either use your phone as a virtual terminal or take secure payments from customers in a card present environment.

### Electronic Bill Presentment and Payment

Make it easier for your customer to pay you. Automate your invoicing process by including a link taking the card holder to a card payment process. In built processes allow for reminders for bills that have not been paid.

### Virtual Terminal

ConnectPay includes an unlimited user licence that allows companies to process mail order and telephone orders on their desktop or laptop computers. The virtual terminal also includes the facility to send customers receipts for card payments branded in your own colours.

### Recurring Card Payments

ConnectPay includes a module that allows you to set up and collect recurring card payments from your customers. The RCP module provides a full debt or subscription management tool that handles customer communications, failed payments, expired cards and card holder receipts.

### PCI Compliant Call Centre Payments

Take your call centre out of scope for PCI compliance by redirecting card holders to the ConnectPay ATP function for the card entry process. Works either as a stand-alone application or integrated with your own CRM / call centre software

### APIs

Integrate any of your application or point of sale software into any of these different payment channels. Free test account details and dummy card details are included as well as free technical support during any integration.

### Integrated Chip and PIN

PCIDSS complaint mobile Chip and PIN terminals provide secure face to face transactions with useful user management information. Can be easily integrated with your point of sale software.
