Adelante

# SmartPay
MobileApp

Fully integrated with the Adelante SmartPay Income Administration System, the SmartPay Mobile App is now available for release:

The mobile software application or "App", has been developed to take credit/card payments via Adelante's SmartPay Income Administration System (IAS).

SmartPay IAS is widely used by UK local government authorities and private organizations to collect, allocate and distribute income within an organization. One element of the collection process is to take payments for goods and services using a credit or debit card. SmartPay has a number of payment channels (e.g. web sites, call centre, 24/7 automated response) to support this function, and payments made via a mobile phone application is the focus of this document.

The model for this type of payment channel is that a customer of an organization that uses SmartPay IAS, can go to that organization's web site, and download a mobile payments application onto their phone. When the application starts it will pre-configure itself with the types of payment the organizations wants to accept, its rules for processing each payment, the charging schemes, and the means to process the card payment.

If the organization chooses to change any of the configuration data for their application they simply change these details on SmartPay IAS, and they will be propagated down to each customers phone the next time they start the app.

The SmartPay Mobile App is intended for use by customers of a given organization to make debit and credit card payments to that organization, with their own cards. This mode of operation renders the mobile application out of scope for compliance against the Payment Card Industry Data Security Standard (PCI DSS).

✔ Licensed per authority for unlimited downloads

✔ Available for Android, iOS and Windows Mobile

✔ Centrally administered and managed from within SmartPay

✔ Secure, encrypted point to point communication from the mobile handset inbound/outbound

✔ PCI-DSS compliant card processing element

✔ Transaction receipting

✔ Historical Payment Reporting

✔ Branded with authority logo & colour scheme

Short term trials are available, sign up today
